Geographic breadth of semantic SAE features

Each point is one previously classified dimension (n=2,626); boxes show the median and interquartile range

Breadth = 1 / Σ(city response share)². City response is averaged equally over observed 1-km cells. Whiskers mark the 5th–95th percentiles. Excludes 1,264 unresolved dimensions, 17 spatial-encoding dimensions, and all people (46) and vehicle (143) features; all other prior class assignments and review statuses are retained.
