Roads · SAE feature responses across 30 study cities

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Signs · SAE feature responses across 30 study cities

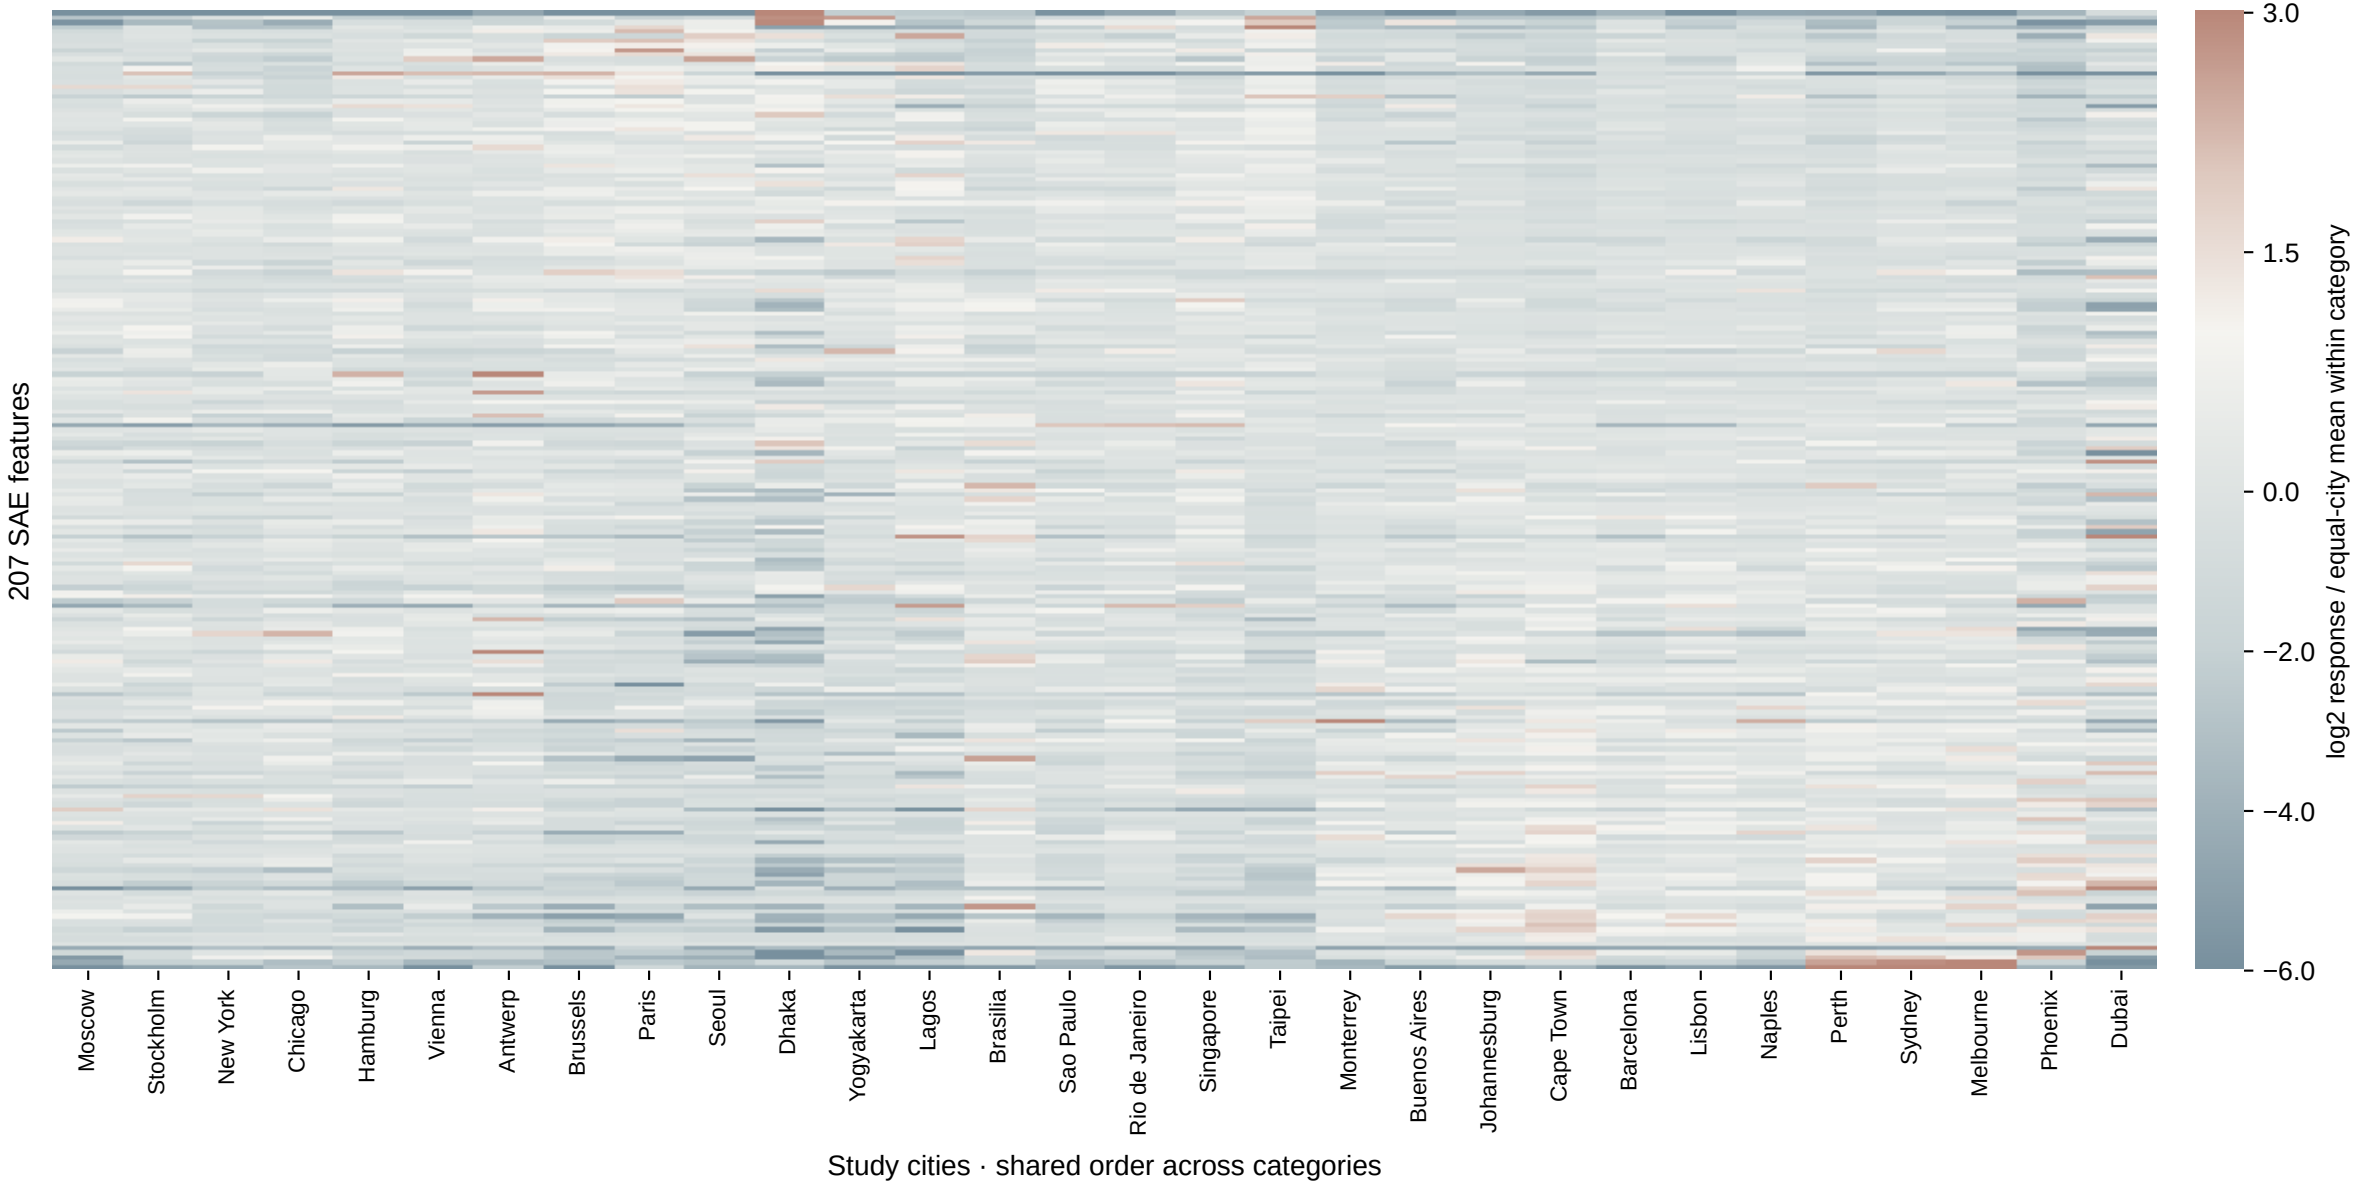

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Sky · SAE feature responses across 30 study cities

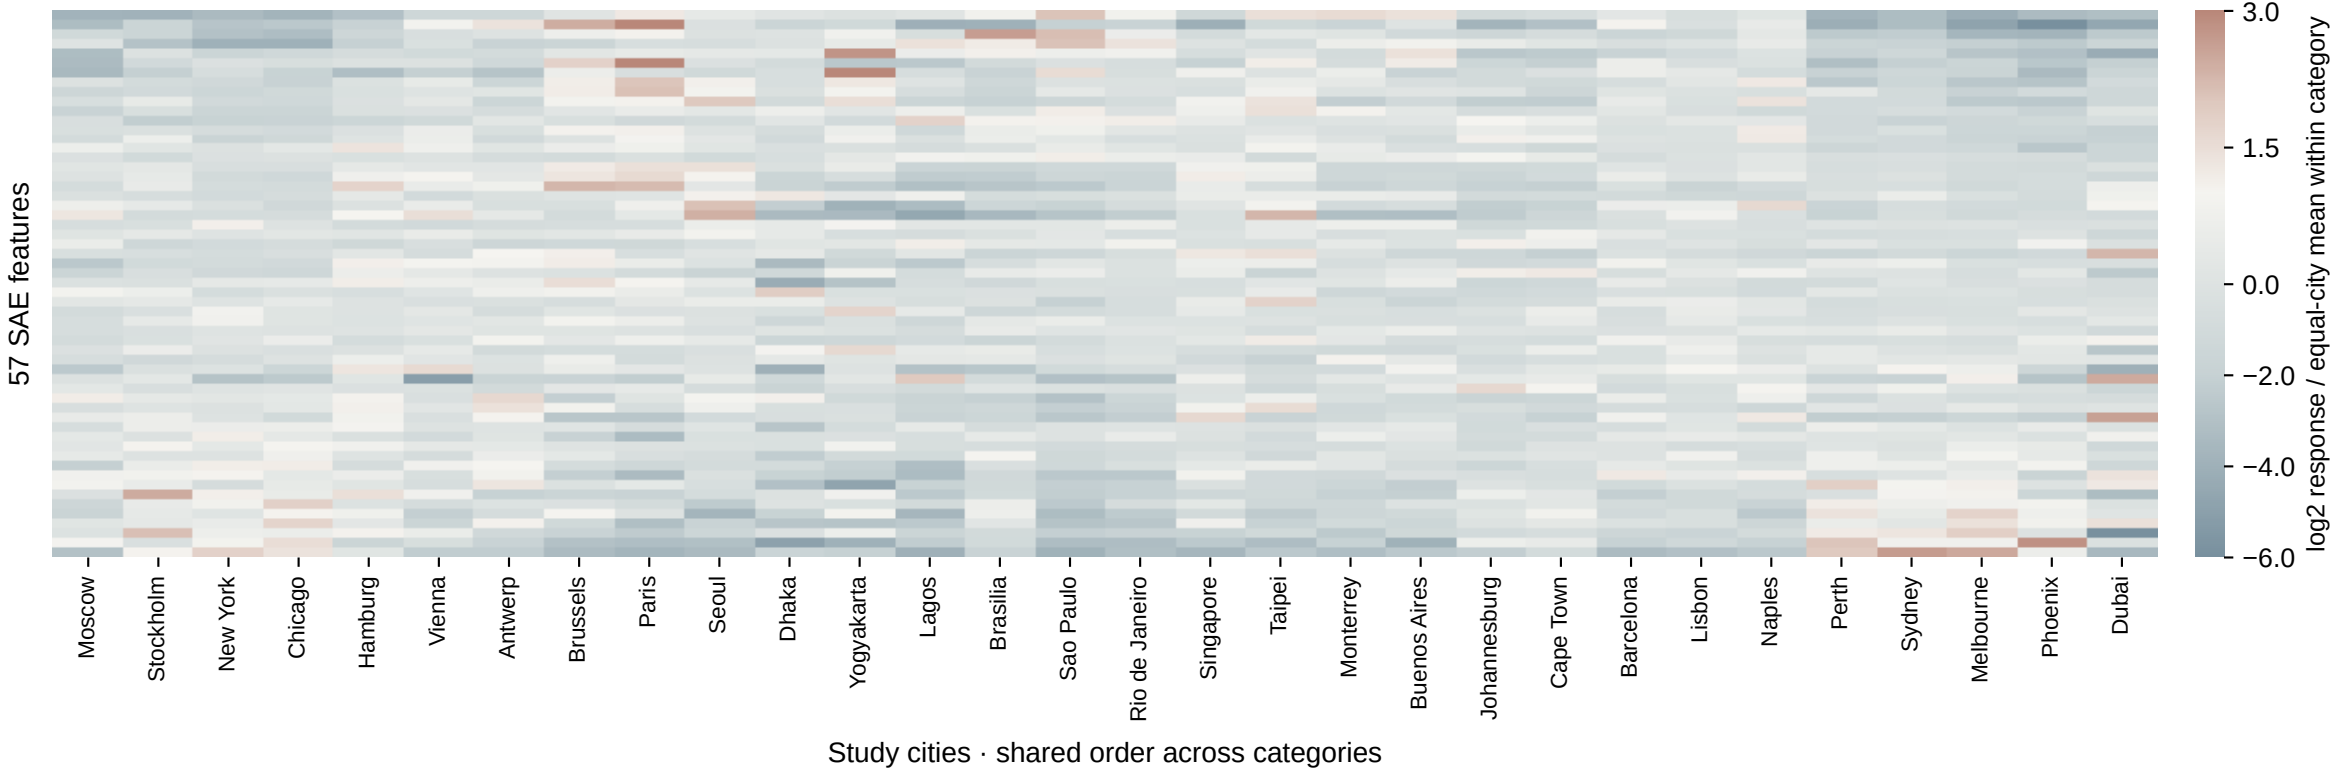

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Barriers · SAE feature responses across 30 study cities

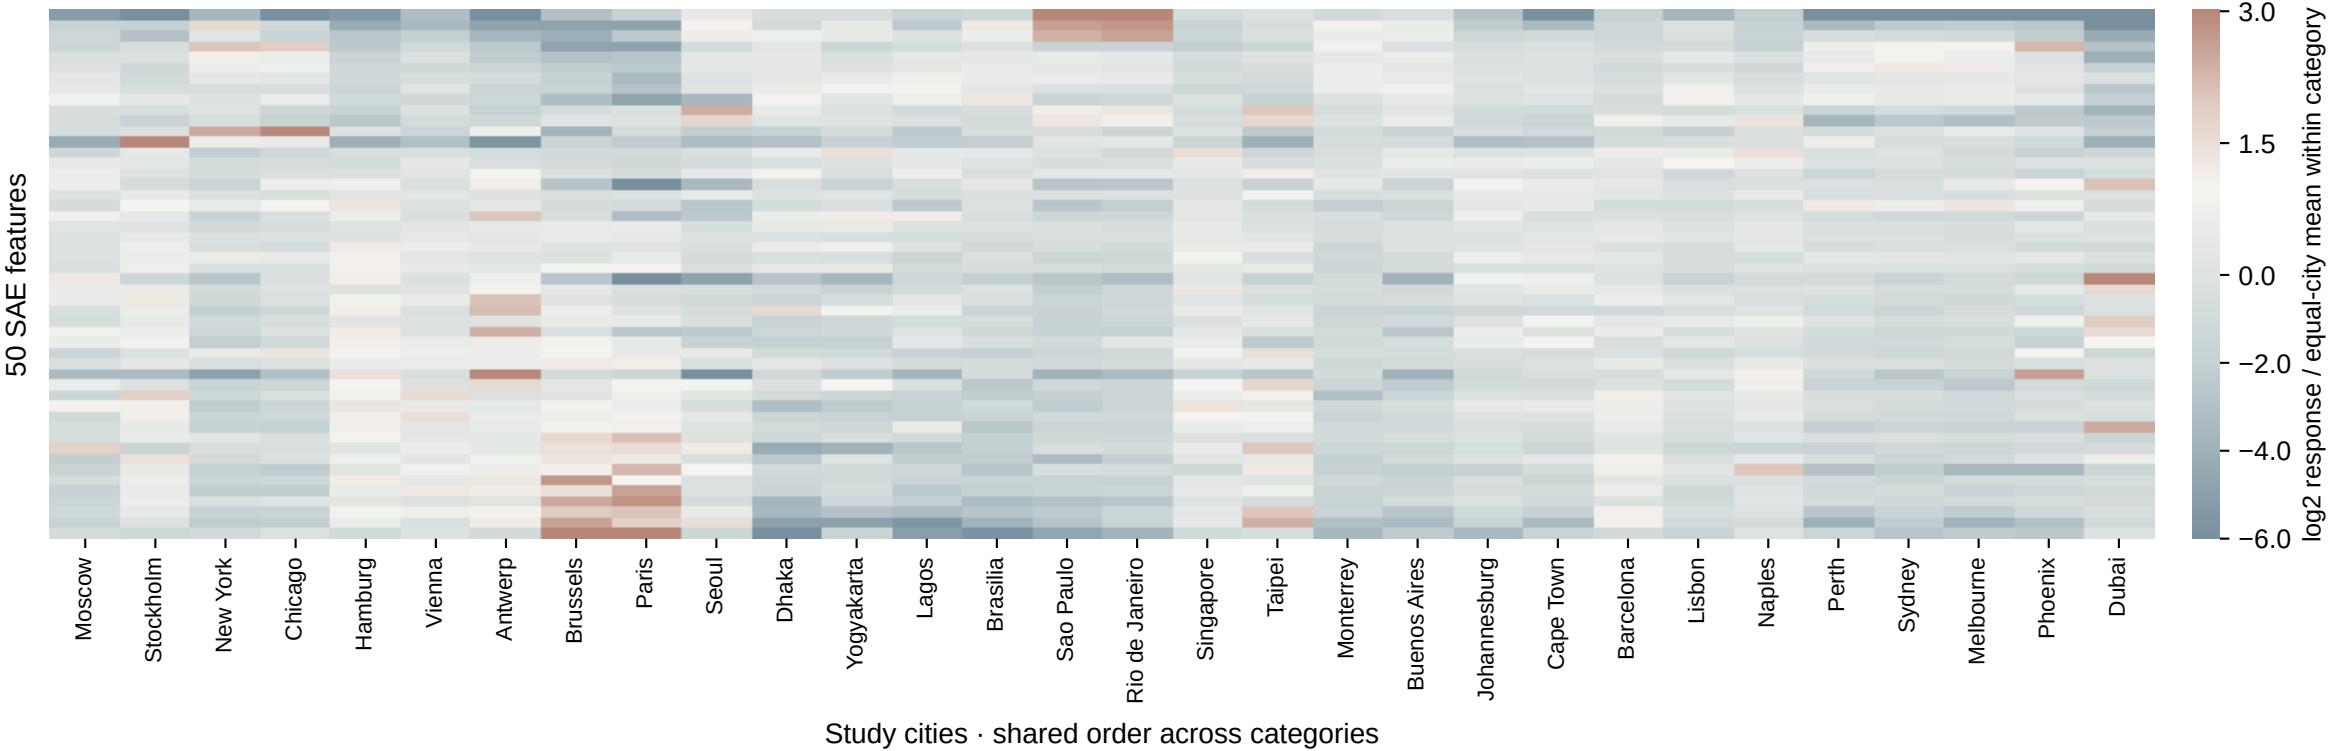

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Utilities · SAE feature responses across 30 study cities

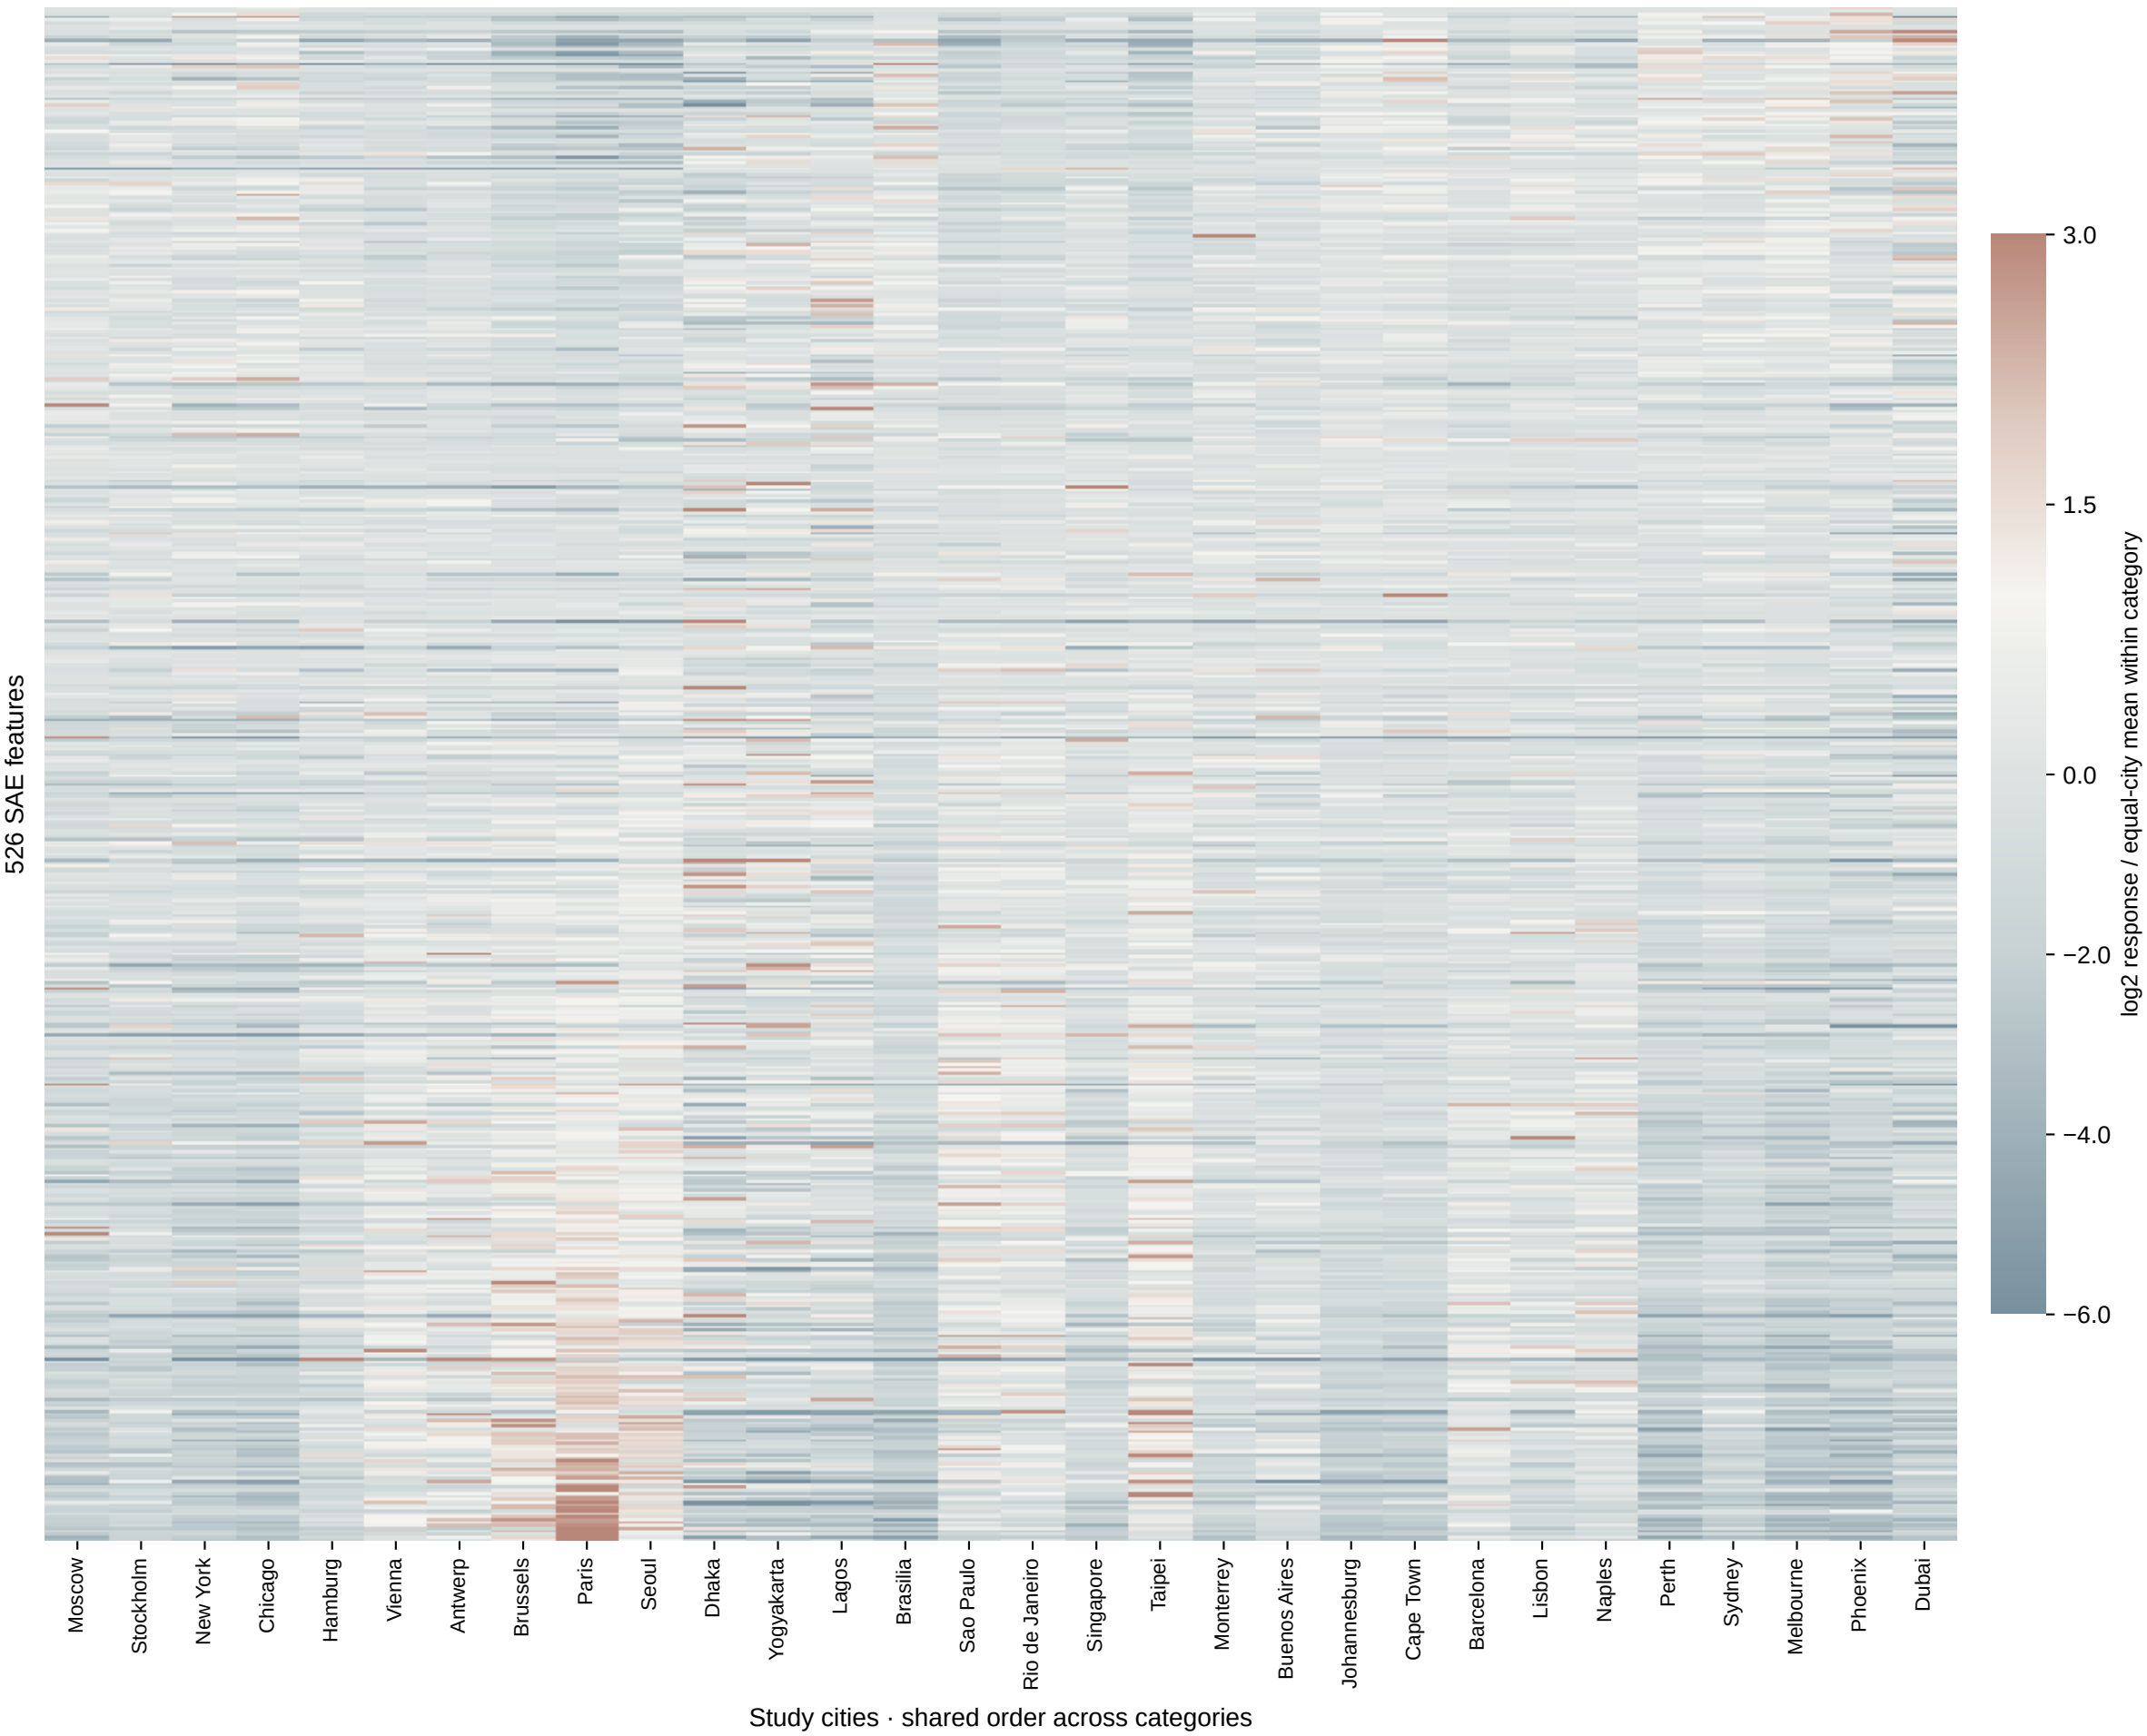

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Unspecified ground · SAE feature responses across 30 study cities

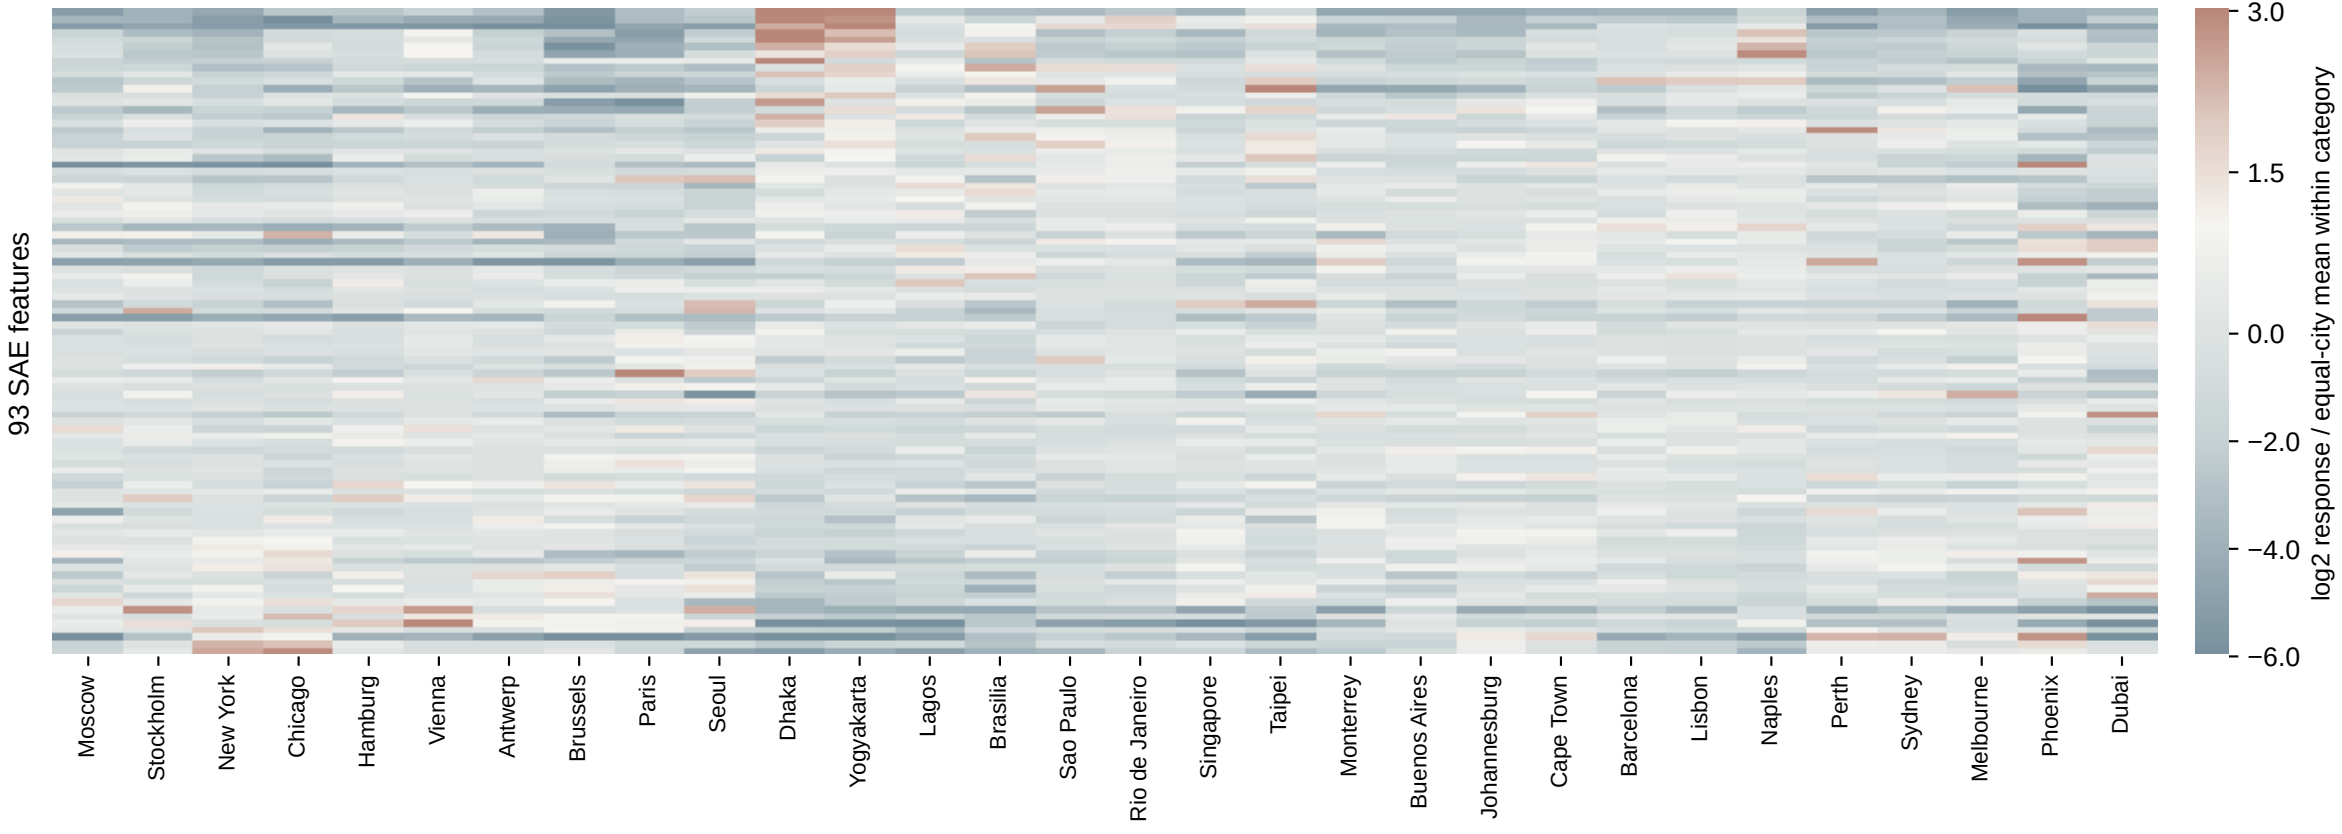

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Low vegetation · SAE feature responses across 30 study cities

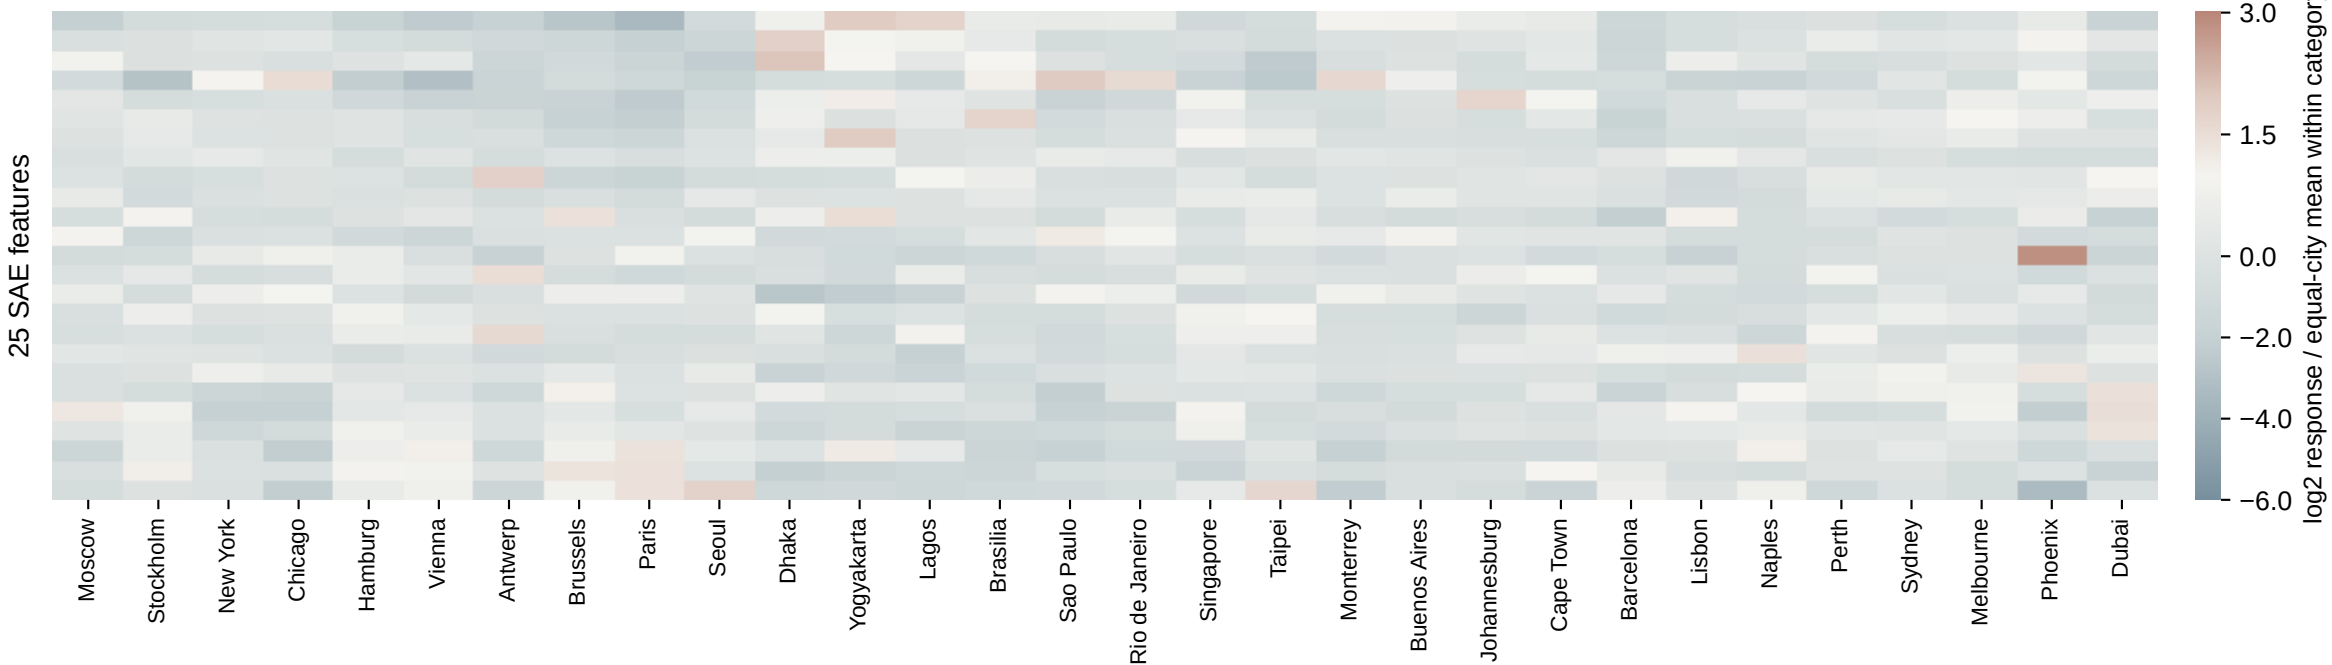

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Construction · SAE feature responses across 30 study cities

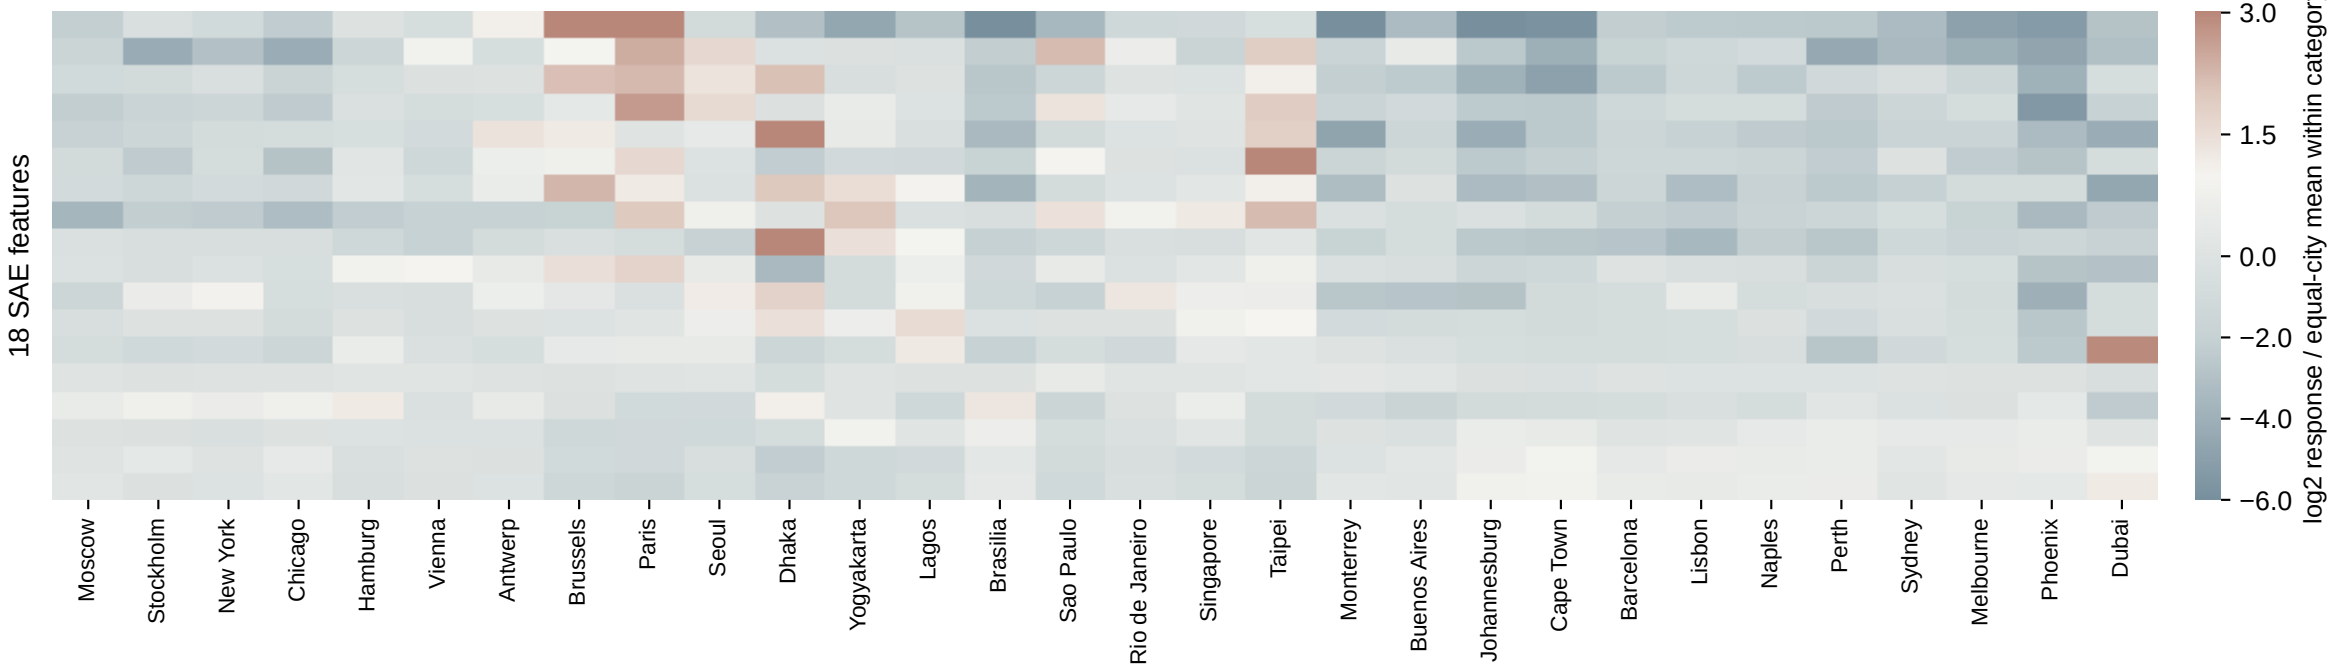

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Water · SAE feature responses across 30 study cities

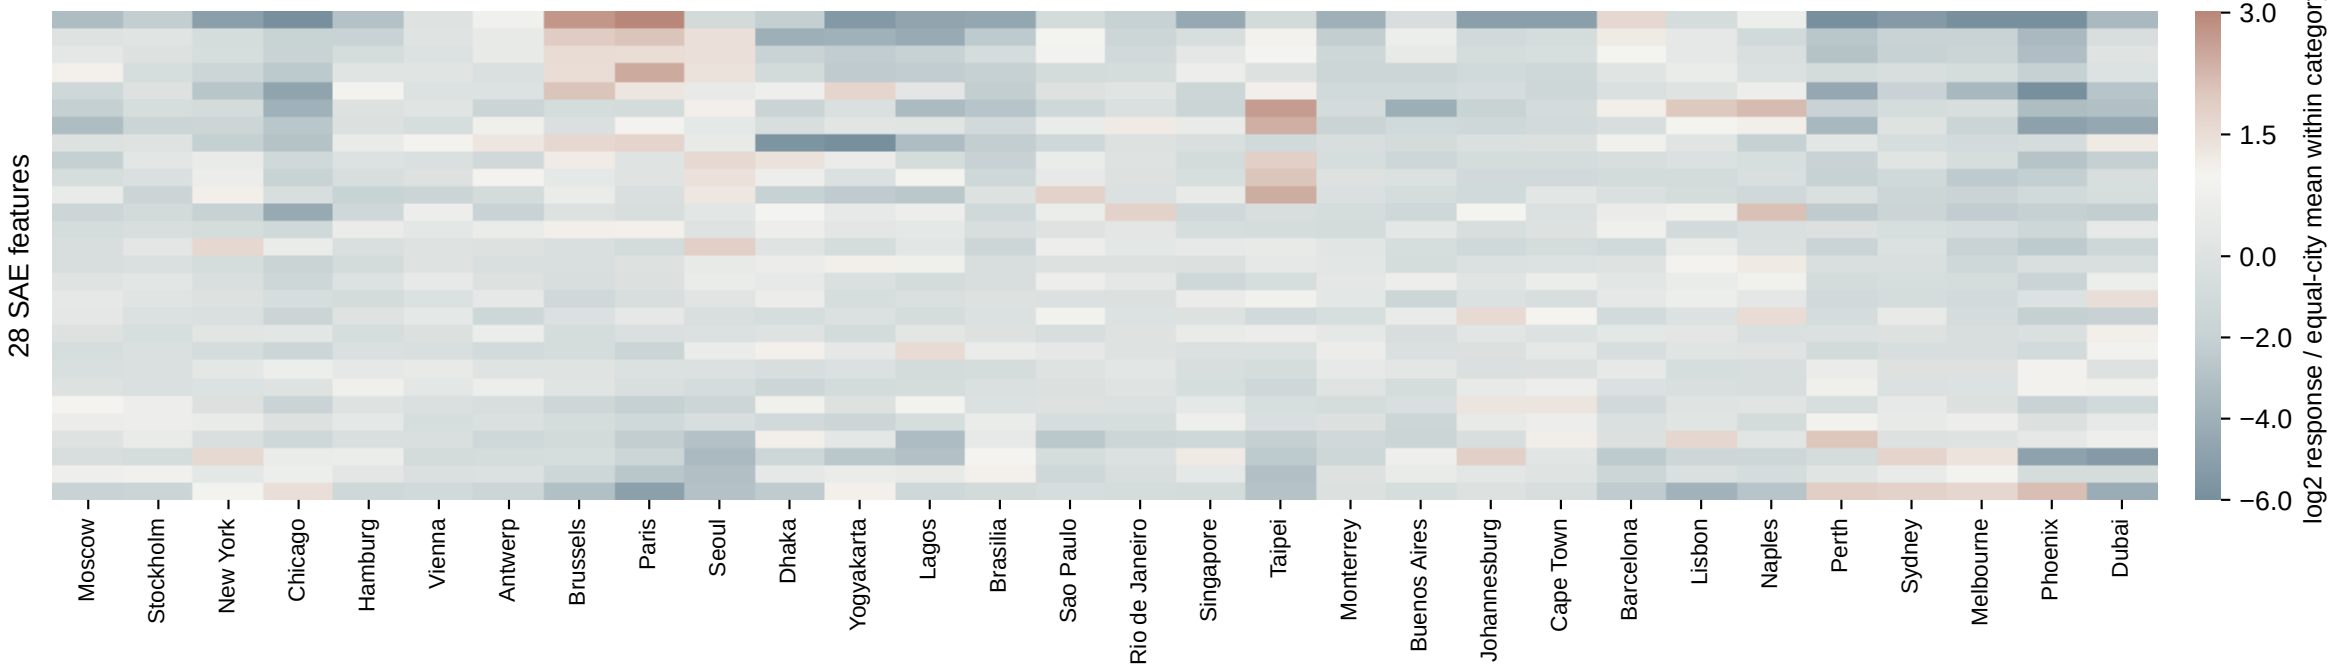

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Pedestrian space · SAE feature responses across 30 study cities

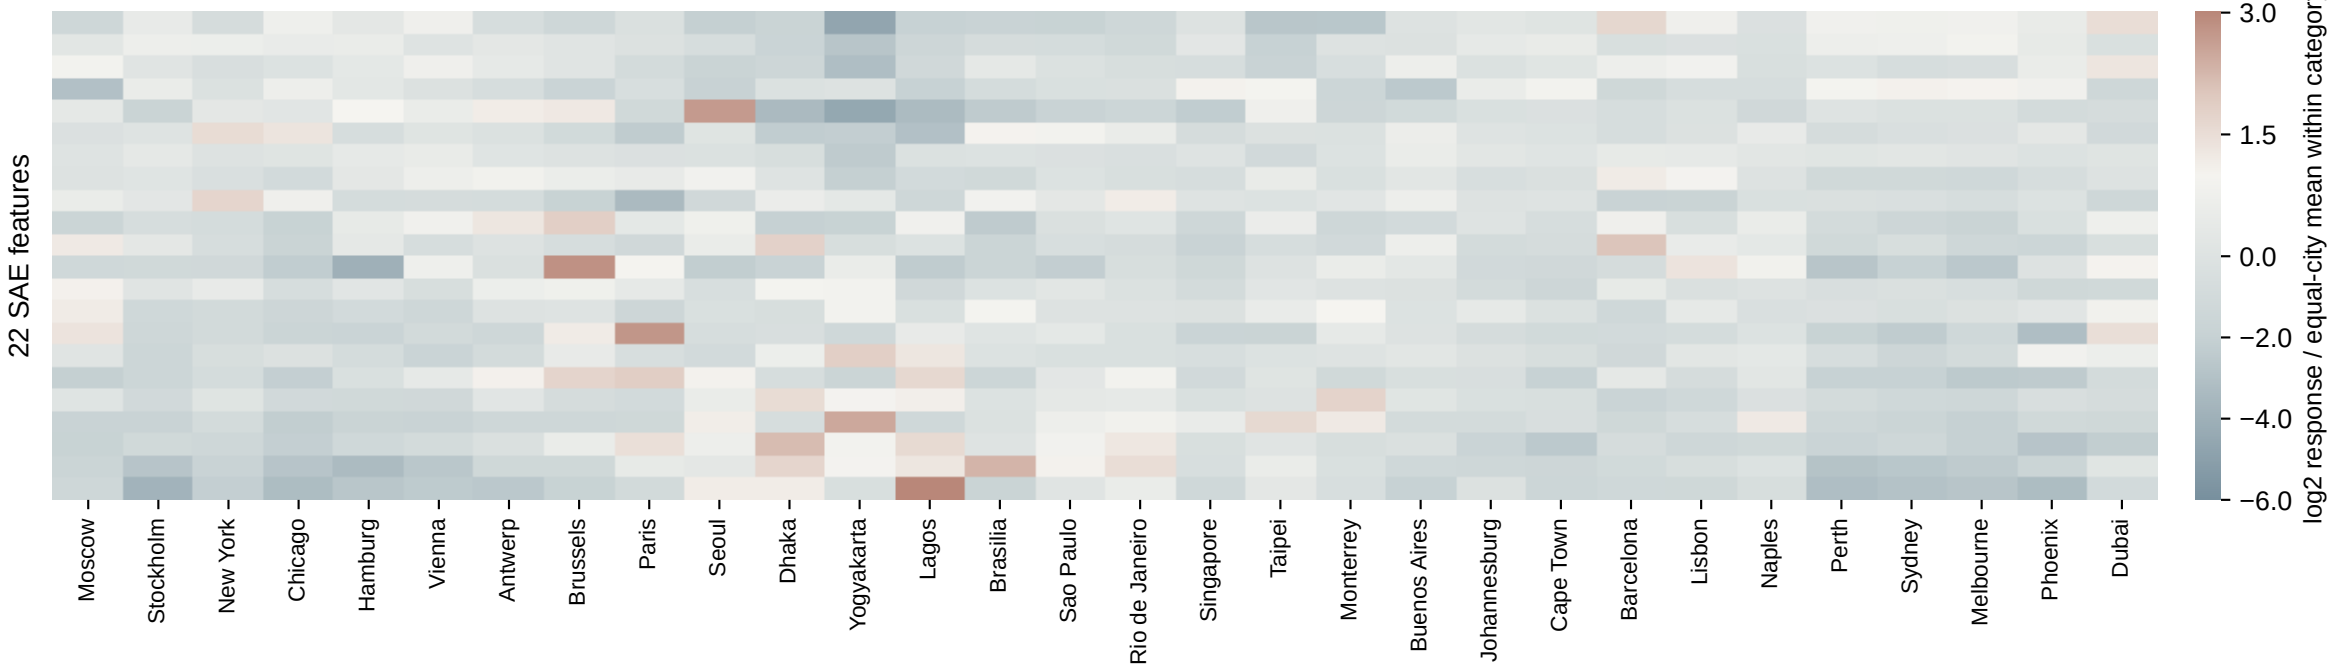

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Street furniture · SAE feature responses across 30 study cities

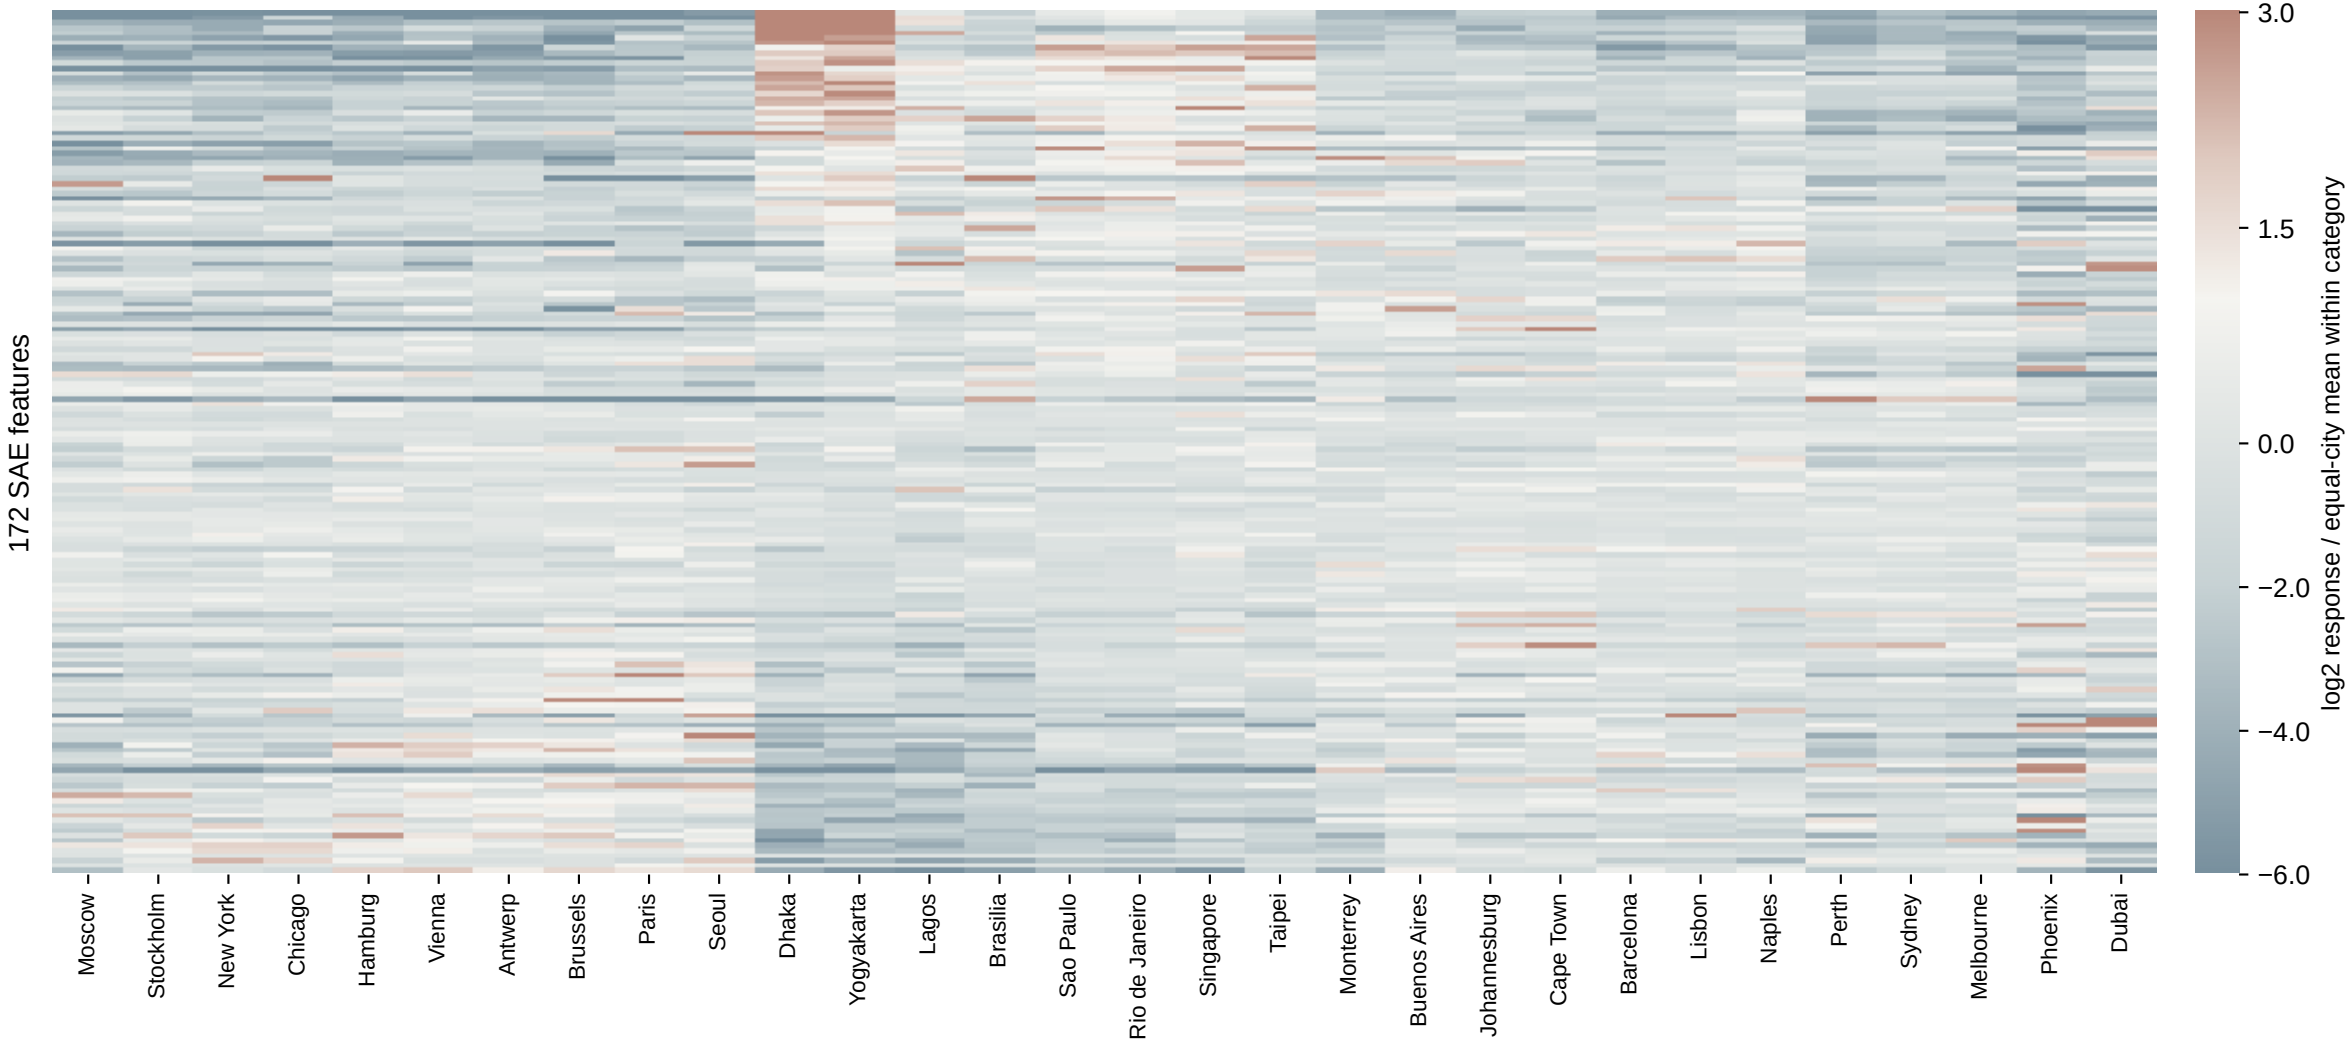

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Unspecified vegetation · SAE feature responses across 30 study cities

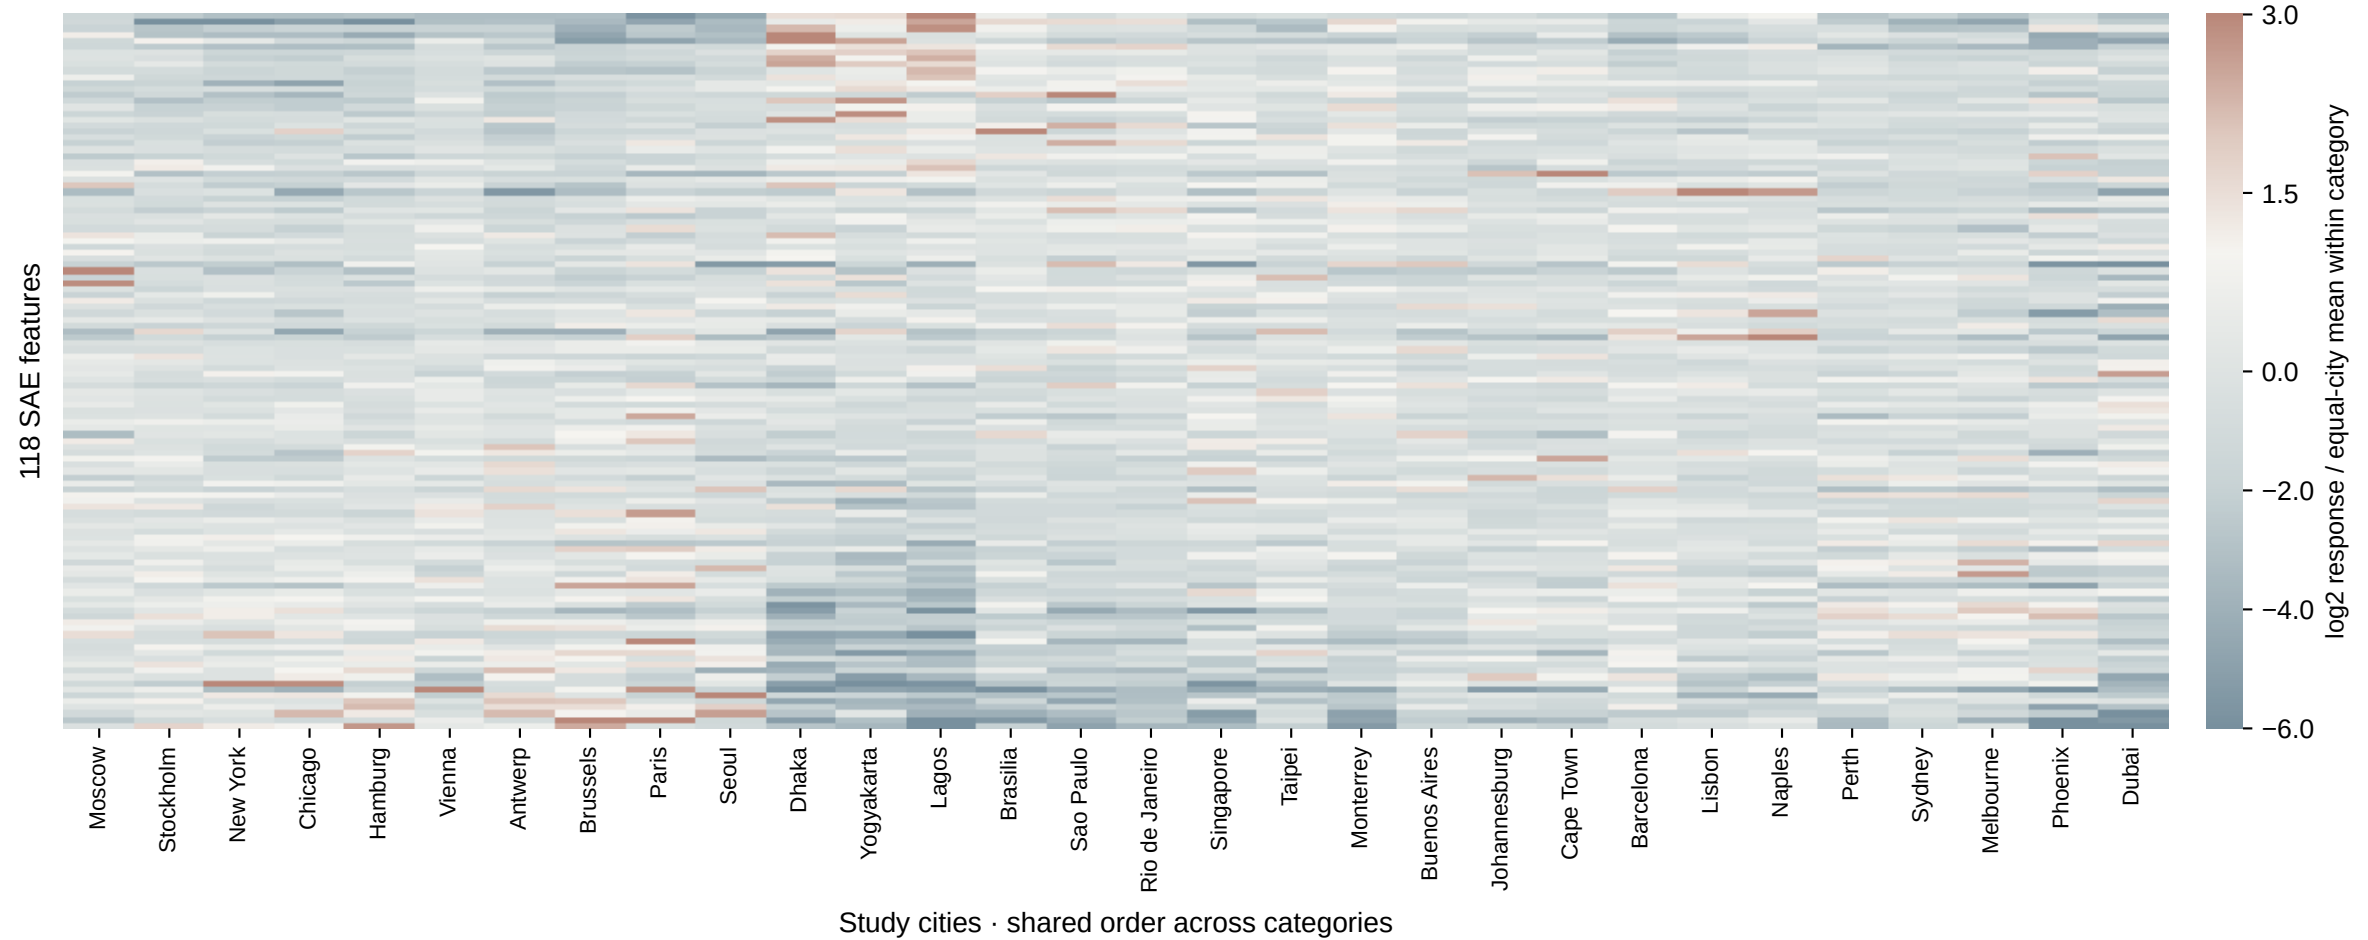

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Unspecified materials · SAE feature responses across 30 study cities

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Transport structures · SAE feature responses across 30 study cities

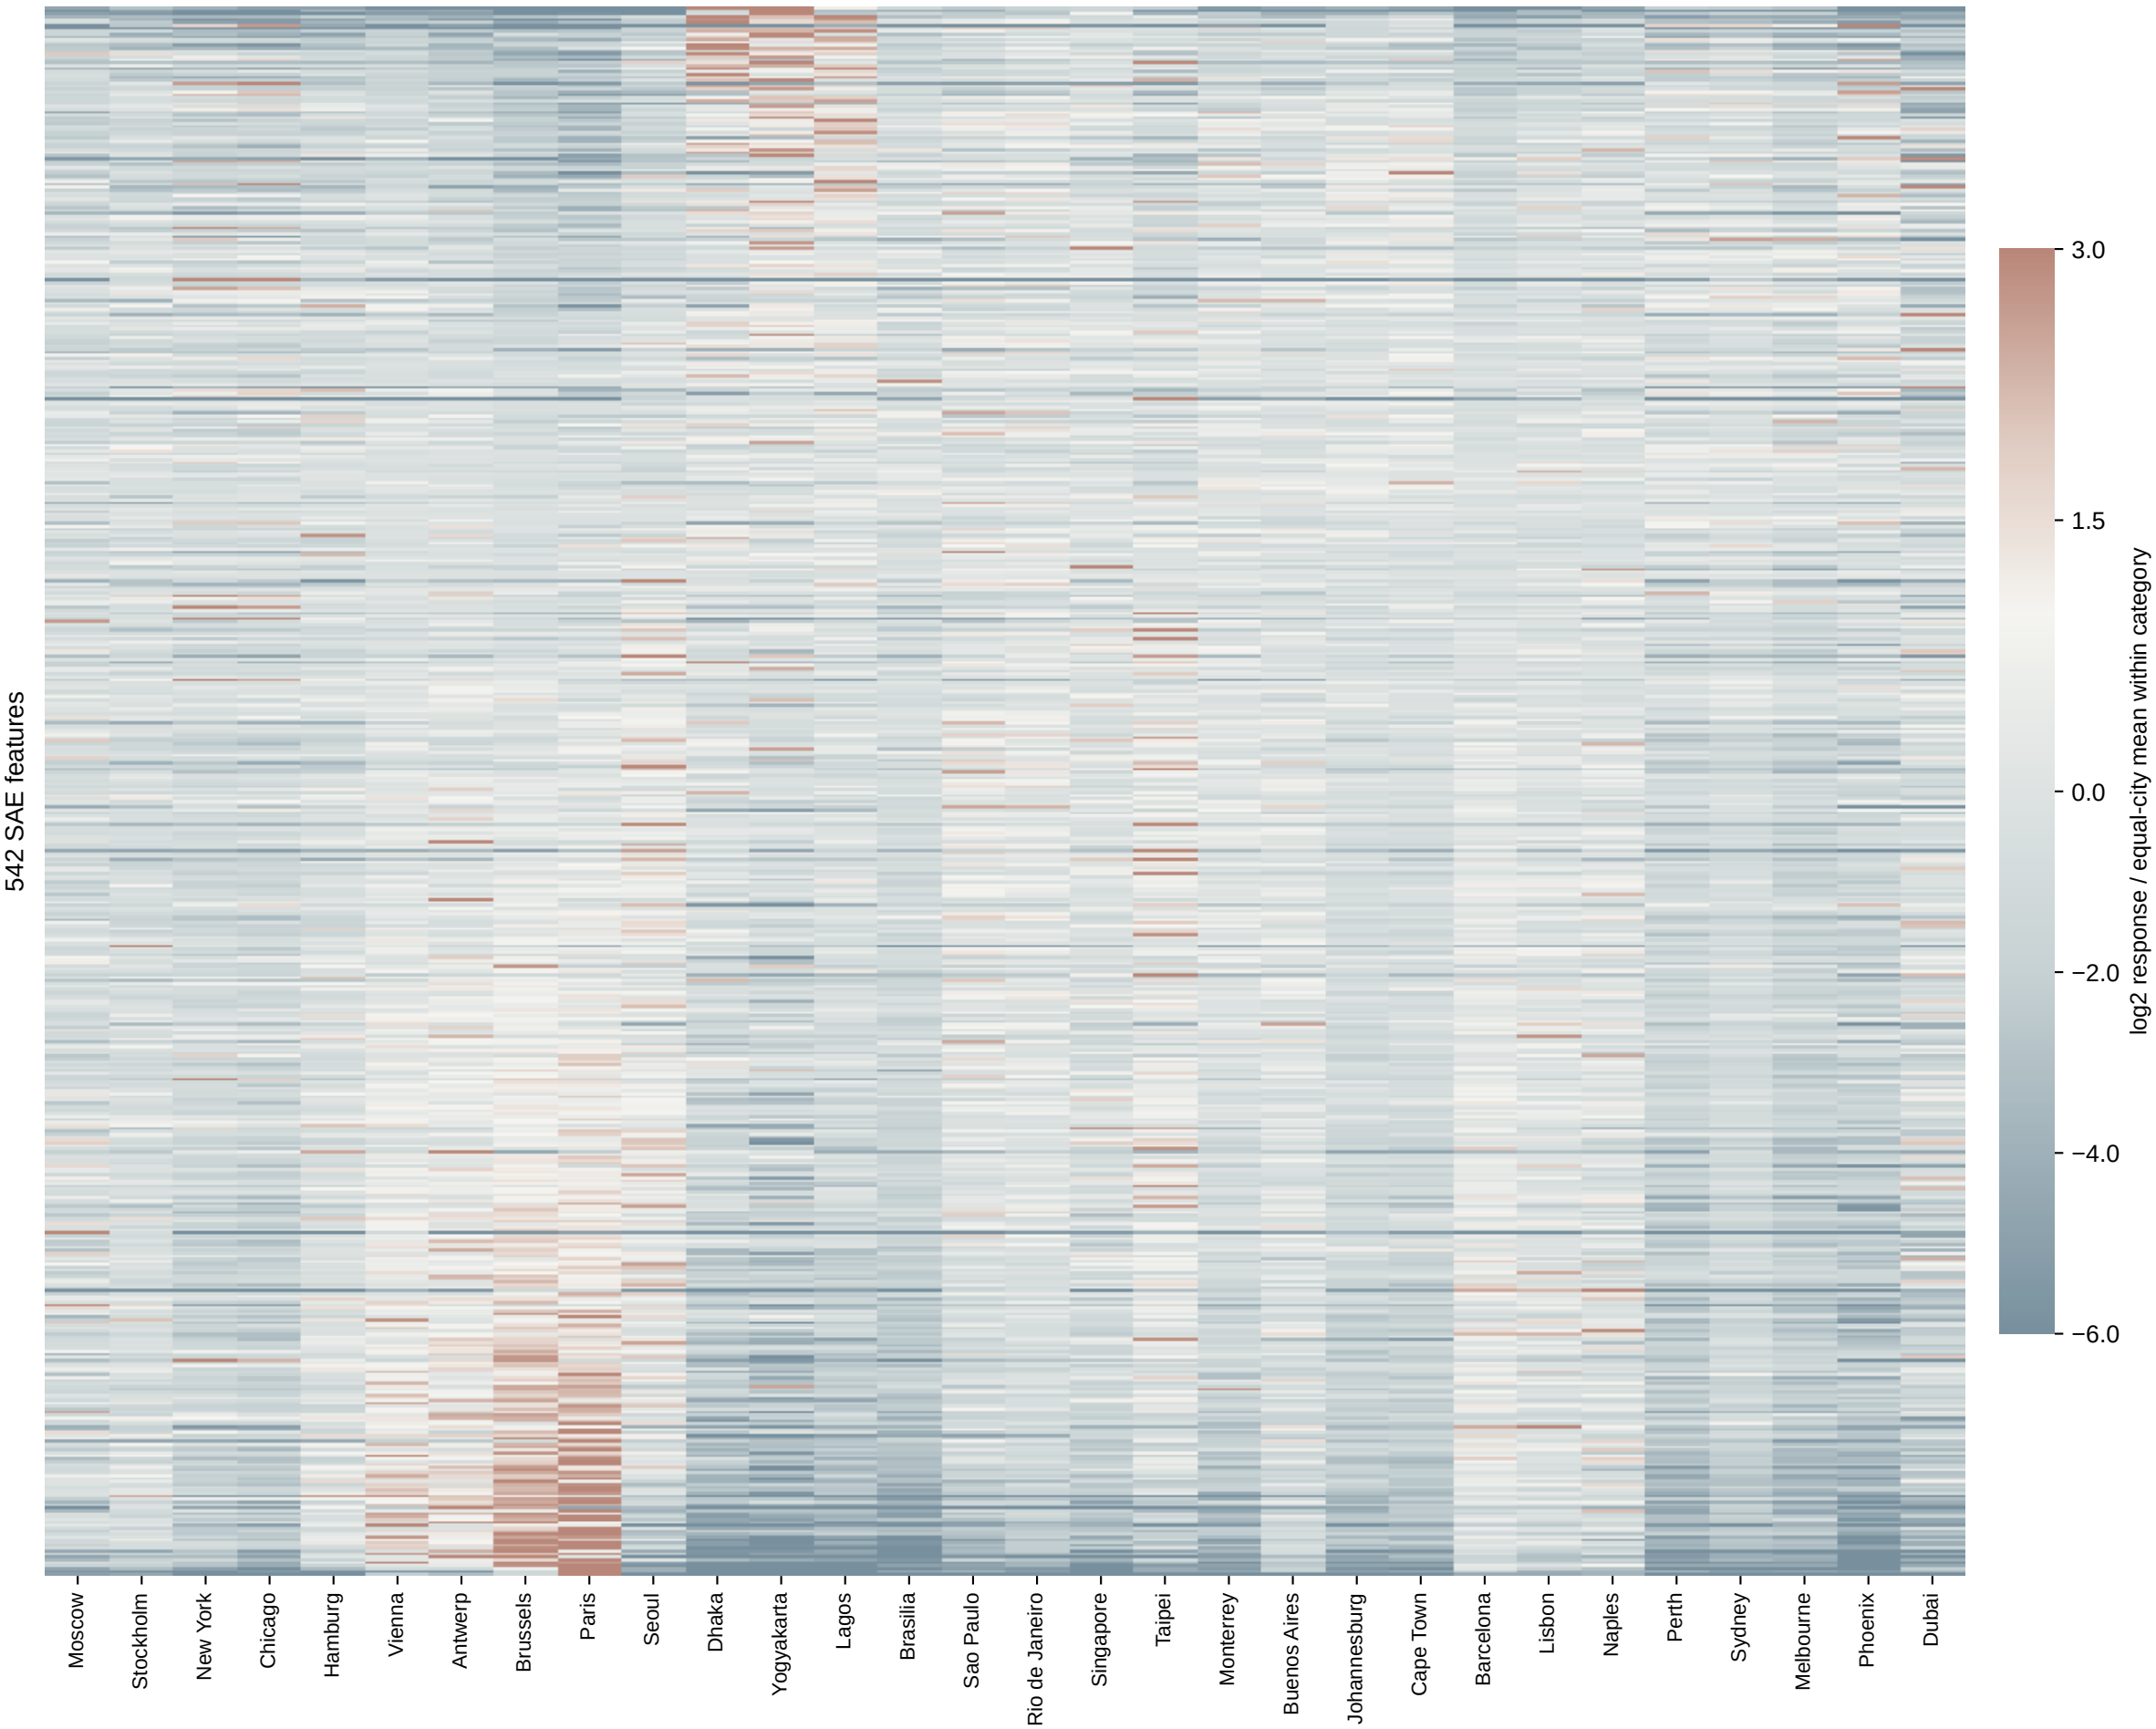

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Buildings · SAE feature responses across 30 study cities

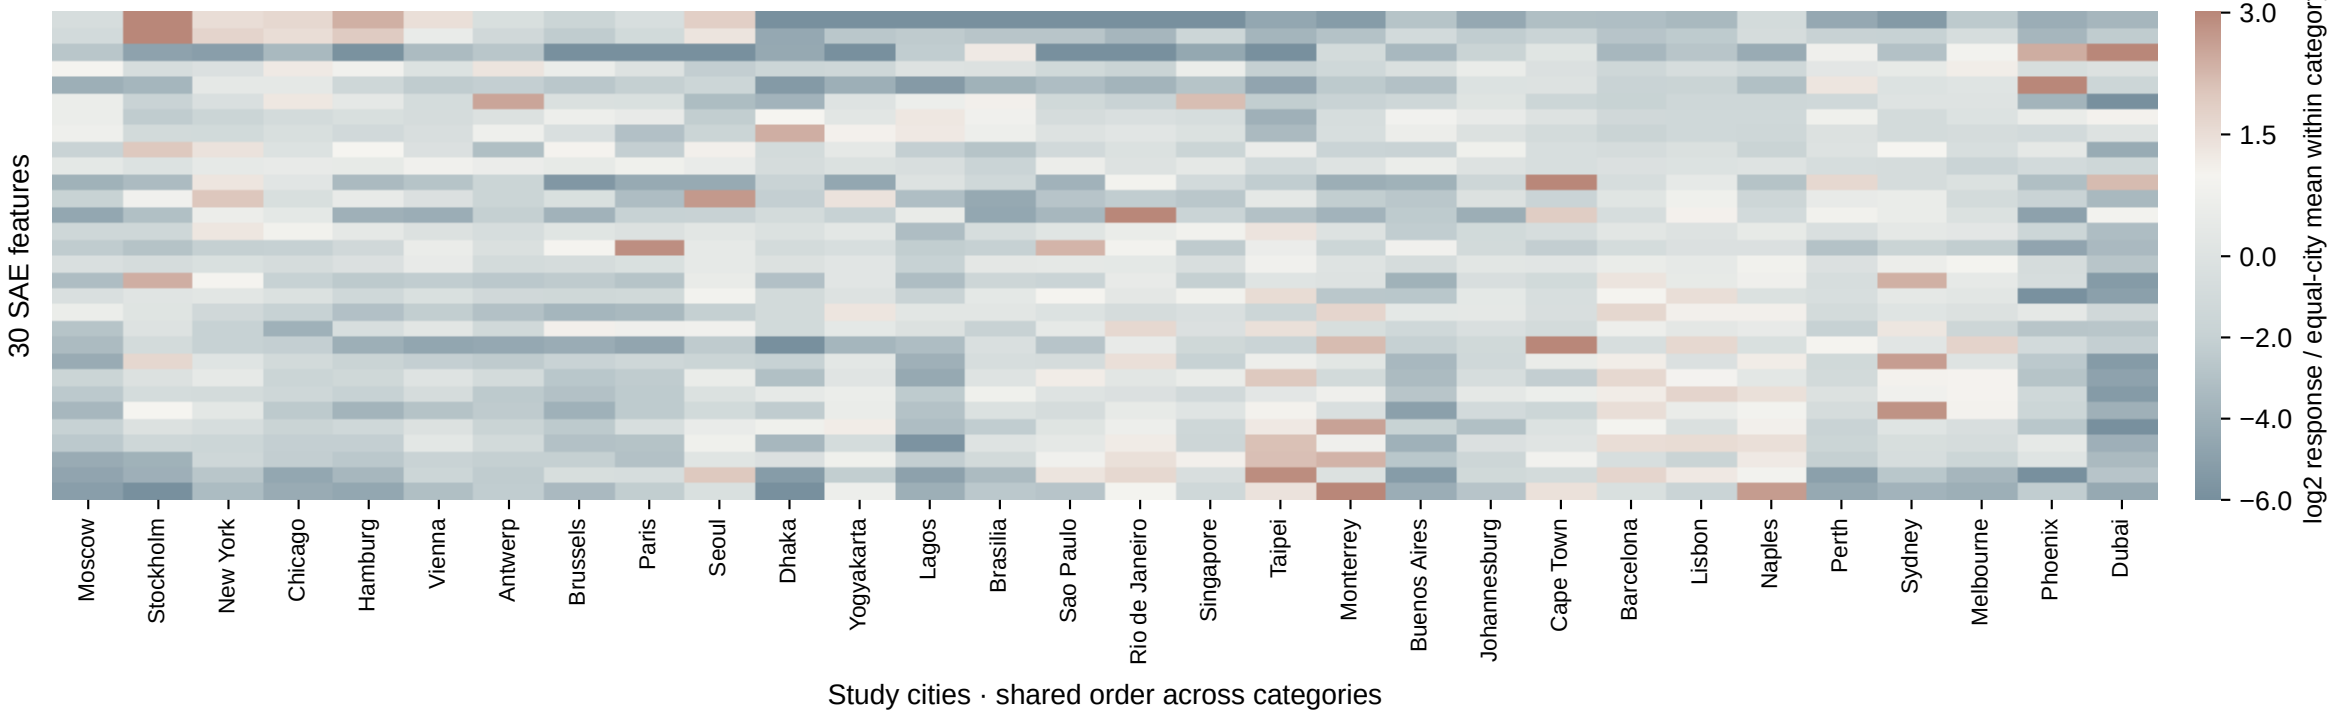

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Terrain · SAE feature responses across 30 study cities

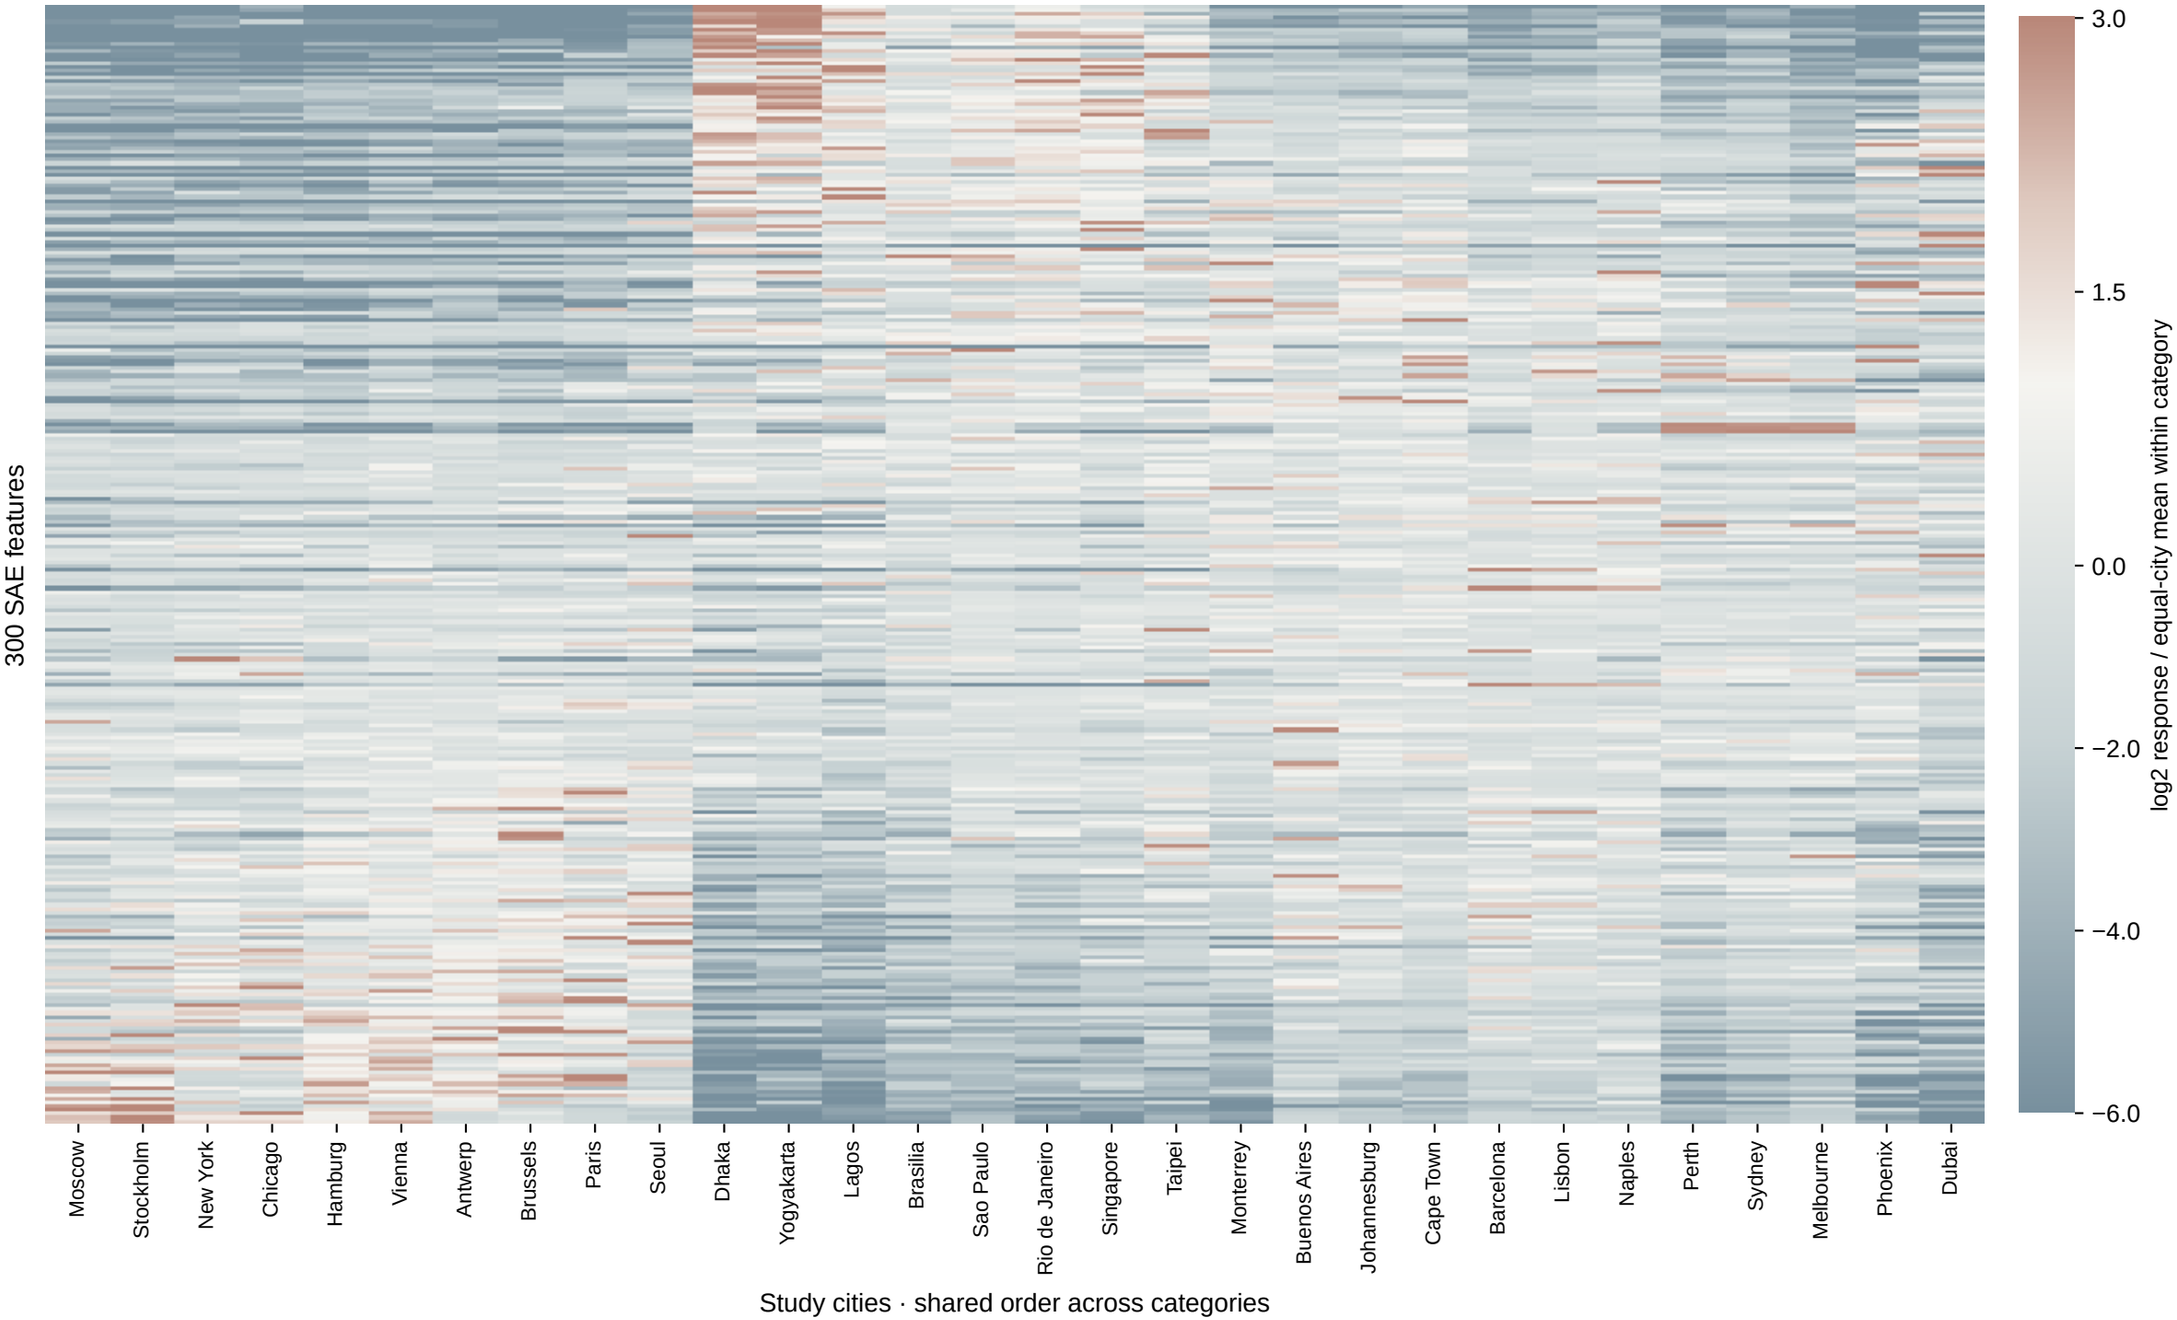

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Trees · SAE feature responses across 30 study cities

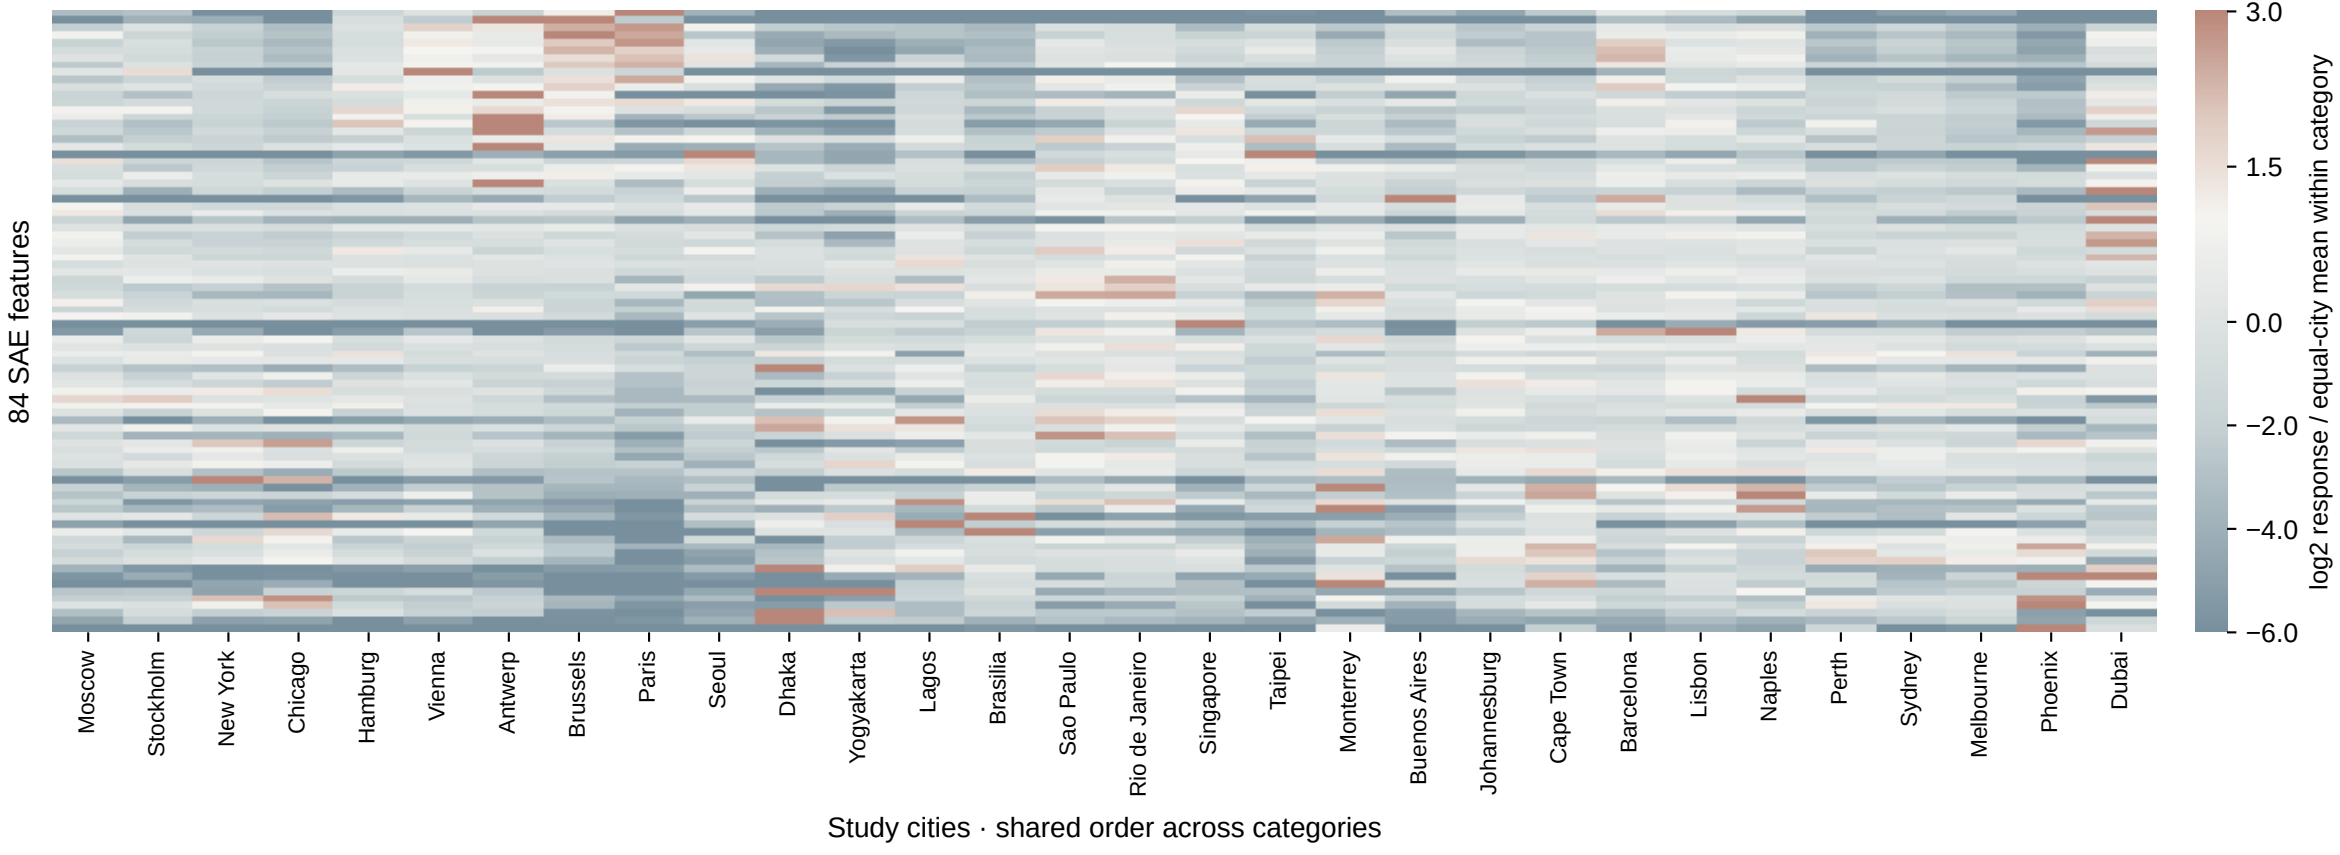

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.

Scene context · SAE feature responses across 30 study cities

All previously assigned dimensions in this category; no cluster tree or cluster labels

Within each city, response is normalized across this category; color is relative to each feature's equal-city mean. Feature rows are arranged by response-profile similarity. Labels are provisional.
